

User Manual

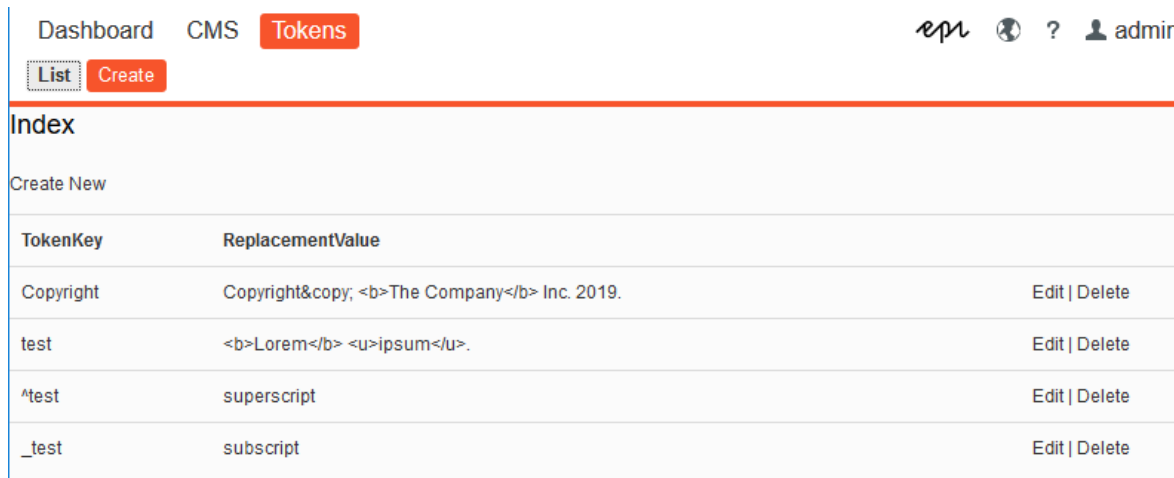

You should see a new “Tokens” option in the top navigation:

The list will be empty initially until you add entries. To do so, use the “Create” option.

Once you create an entry it will be displayed under “List”

You have the option to “Edit” and “Delete” each entry.

Edit

ReplacementToken

TokenKey	<input type="text" value="Copyright"/>
ReplacementValue	<input type="text" value="Copyright&copy; The Company Inc. 2019."/>

Delete

Are you sure you want to delete this?

ReplacementToken

TokenKey	Copyright
ReplacementValue	Copyright© The Company Inc. 2019.

| [Back to List](#)

Once you have an entry created, you can use the “TokenKey” value wrapped in double square brackets. For example if your TokenKey is **Copyright** then you should use **[[Copyright]]** in any text field in the site.

Another thing to note is that if your TokenKey starts with ^ it will be a superscript. If it starts with _ it will be subscript.
